Experience

Wise — Financial Technology

September 2023 — Present

Software Engineer II

Tallinn, Estonia

- Migrated the send-money calculator from a client-driven implementation to a backend-driven model. Delivered +0.65pp conversion uplift resulting in GBP 481m/y xCCY volume impact
- Scoped and implemented homepage calculator migration relying on volatile redis guest-sessions with seamless session promotion upon signup. Supports an average of 5.76 million sessions per day
- Designed and developed backend driven requirements (KYC, transfer purpose, contact validation) reducing average time in flow from 4.5 minutes down to 3.5 minutes globally
- Migrated to the backend transfer creation via a SCA-protected endpoint, used to create 450m transfers since inception. Introduced duplicate transfer warnings shown 800k/m reducing CS escalations and refunds
- Collaborated to bring "Account Structure" redesign to Wise. Enabled funding, adding, converting, moving money accross any currency jar
- Involved in the on-call rotation, introduced several caching layers reducing calls by a combined 40.000 rpm. Enhanced service reliability reaching 99.99% availability

Amazon — Technology Company

May 2023 — September 2023

Software Engineering Intern

Berlin, Germany

- Part of the Music Feature Repository team providing personalized recommendations and suggestions to users
- Built back-office tooling reducing machine learning feature on-boarding time and enhancing feature ownership

Wise — Financial Technology

June 2022 — September 2022

Software Engineer Intern

Tallinn, Estonia

- Part of the Send Money team which owns the global cross-currency transfer creation flow
- Delivered "Saving Senders as Contacts" which automatically creates a contact for the recipient of a transfer
